Dear HUM investors,

While greeting the new year, Humanscape team also had a busy time reviewing what we've done last year for the project and refining our roadmap for 2019.

Here are our new updates and goals regarding the project for year 2019 and summaries from last year. Hope this helps you understand better our journey ahead.

Always grateful for all of your support and belief in our project.

Thank you.

## 1) Patients perspective : focus on data collection and utilization

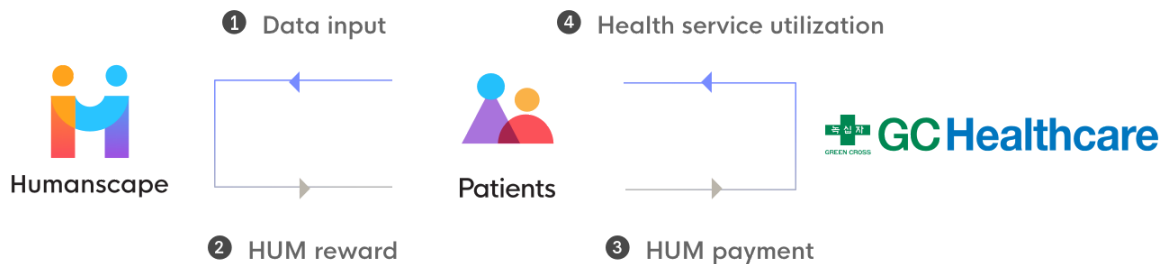

Beginning with RP disease(Retinitis Pigmentosa) this year, we will be expanding cooperations with other rare, incurable diseases and cancer related patient associations. Our main focus is to create a virtuous cycle, bringing patients better chance of cure with the data voluntarily provided by them.

[Example 1]

As one of the steps to achieve our goal, **Humanscape signed an MOU with eBay Korea, to provide e-commerce feature on our platform.** Patients will be able to purchase medical device, health functional food, sanitary aid, etc with HUM they earn by entering their health data.

[Example 2]

Humanscape also has been cooperating with other healthcare companies such as GCHEALTHCARE, one of the major Korean healthcare companies, so that patients can use offline healthcare services as well with HUM.

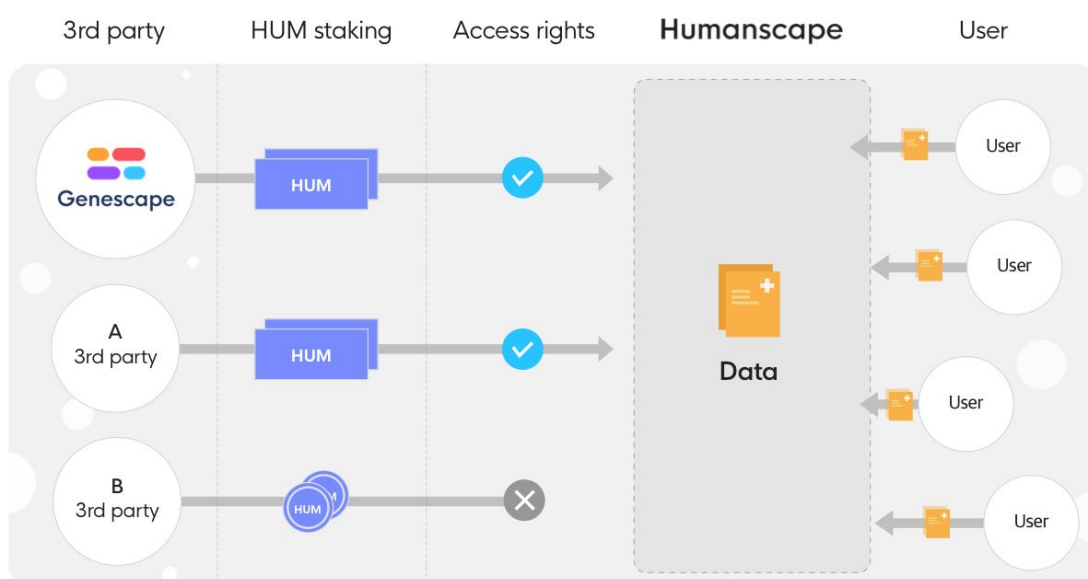

## 2) Token holder perspective : efforts on increasing HUM value

As you all probably know well, many of the ICO projects from last year have taken emergency measures, such as buyback, to defend token price in continuous bear market. However, we believe that this kind of measures aren't the best choices for token holder's sake, as it is very short-term oriented, temporary approach when token liquidity isn't secured enough.

In order for HUM tokens to have higher value, fundamentally, there should be active circulation of HUM and patients data on Humanscape platform, with continuous demand for HUM. This is very important, not only for HUM holders but also for all the participants in Humanscape ecosystem.

Therefore, **Humanscape has implemented 'HUM staking' system. Other 3rd parties who wish to utilize data collected on Humanscape platform needs to stake certain amount of HUM, and this is expected to cause continuous demand of HUM tokens, ultimately enabling better data circulation.** The very first step is Genescope's HUM staking, Humanscape's genome data related-subsiary.

[Token sale result]

ICO allocation	Total sales	Remaining HUM	Subject to burning	Total sales + Subject to burn
50,000,000,000	33,473,427,322	16,526,572,678	16,526,572,662	*49,999,999,984

\*The reason being 'remaining HUM' and 'HUM subject to burning' are not equal is due to the rounding off numbers on ledger. The difference is 16HUM, which is worth about \$0.0032.

[Token burn summary]

Burnt quantity	%	Explanation	TXID
278,715,812	0.22%	Due to the communication issue with the IEO channel (Tokenbank), there was a small amount of unsold HUM from 2nd pre-sale.  (100HUM of <a href="#">Test burn</a> and then the rest - TXID on the right)	<a href="#">0x47a83d6b64a6d536dafb6bda4bd9342f88abdbd10acef4d08ab214668b8e612a</a>
6,598,739,950	5.28%	Along with the change of ICO schedule, each sale cap was also adjusted accordingly. These are the differences between the original and adjusted cap.	<a href="#">0xf4f856dd0a2fe8042dd5da38429dc2792dc899902f8c3bfe8dd0b91082852e32</a>
9,649,116,900	7.72%	As we could not proceed main sale due to the market situation, part of main sale allocation were moved to separate wallet for institutional investors and these are what's left.	<a href="#">0x2dec7098e28ba6489cef89f9557db13bfe5423212138a4133263f2dcb988ea59</a>
<b>16,526,572,662</b>	<b>13.22%</b>	<b>Token burn has been completed by Jan 29th 2019.</b>
